## Classifying Quadrilaterals

| Quadrilateral | Definition | Example |
| :---: | :---: | :---: |
| parallelogram | opposite sides congruent opposite sides parallel 2 acute angles <br> 2 obtuse angles |  |
| rectangle | opposite sides congruent opposite sides parallel four right angles $\left(90^{\circ}\right)$ |  |
| rhombus | four congruent sides opposite sides parallel 2 acute angles <br> 2 obtuse angles |  |
| square | opposite sides congruent opposite sides parallel four right angles $\left(90^{\circ}\right)$ |  |
| trapezoid | only one pair of parallel sides |  |

The sum of the measures of the angles of a quadrilateral is $360^{\circ}$.

|  | $123^{\circ}+57^{\circ}+123^{\circ}+57^{\circ}=360^{\circ}$ |
